What is Goldsoft?

Goldsoft is an innovative software tool designed to assist Developers in the creation of:

ROBUST
MULTI-USER
PURPOSE BUILT
MS ACCESS DATABASES

Goldsoft

Robust ★ Multi-user ★ MS Access Databases

Compatibility

Microsoft Access is the only database product in the market which has native connectivity to:

Microsoft Word

Microsoft Excel

Microsoft Outlook

How Does Goldsoft Work?

Goldsoft does 70% of the database build leaving the Developer free to tailor the database to the exact needs of the end users.

Goldsoft

Using Goldsoft is like building a house.

Goldsoft

Robust ★ Multi-user ★ MS Access Databases

Design

The design stage is critical.
The architect draws the plans.

The Database Developer uses Goldsoft to design the table structure.

Goldsoft

Robust ★ Multi-user ★ MS Access Databases

Build

The builder completes 70% of the house from the design plans.

The Goldsoft DB Builder constructs 70% of the database from the table design.

Goldsoft

Robust ★ Multi-user ★ MS Access Databases

Build

Each room is unique in design and purpose, yet integrates smoothly into the house.

All purpose-built Goldsoft modules connect seamlessly to form the database.

Goldsoft

Robust ★ Multi-user ★ MS Access Databases

Customise

The final 30% is spent on finishing - colour schemes, floor coverings, landscaping.

The Database Developer spends the final 30% of time delivering exactly what is needed - look and feel, screen layouts, queries, reports etc.

Goldsoft

Robust ★ Multi-user ★ MS Access Databases

Moving Forward

All houses can be extended or renovated as required.

Goldsoft built databases are true multi-user and scaleable.

Goldsoft

Robust ★ Multi-user ★ MS Access Databases

Maintenance

If repairs are required, any licensed tradesperson can handle the job.

Any Access Developer licensed in Goldsoft, can maintain or upgrade your database.

Goldsoft Features

- ★ Goldsoft is true multi-user, using the unique HCS record locking method. Data corruption is a thing of the past.
- ★ All Goldsoft modules are built using the same method, therefore lower development and support costs are achieved.
- ★ The look and feel can be altered to reflect the company profile.
- ★ Databases can be server based (both front and back end).
